RE: REFERENCE/TESTIMONIAL LETTER

Wesley and I have been working together for the past 4 years. We met during a project that I had taken on and by the time Wesley was requested to assist, we had a monumental task to perform. He not only assisted with completing the design during the build, he taught me the fundamentals of design and the importance of having accurate specifications.

We have taken on major and minor projects from turnkey suburb builds to MDU design and deployment. We are still working together until this day. What Wesley brings to the table during any survey, planning and final design of a project is proof of an extremely experienced fibre enthusiast and his passion for the industry is clear.

Wesley has helped me write specifications for FTTH/X deployment, as well as design networks internationally. I recommend Anchor surveys to anyone and for any project in the fibre industry.
